Subject Index

Abdominal aortic aneurysm infected by *Campylobacter fetus* subsp. *fetus* (concise communication), 527–529
Acinetobacter baumanii outbreak in orthopedic ward, analysis of strain relatedness by RAPD and quantitative antibiogram techniques (concise communication), 468–471
Acquired immune deficiency syndrome (AIDS)
  Methylobacterium bacteremia (concise communication), 112–113
  patients with focal neurologic signs, diagnostic role of PCR, 577–584
  safety and complications of central venous catheters, 508–513
  see also HIV
Acrodermatitis chronica atrophicans and immunoblot confirmation of infection by *Borrelia afzelii*/*Borrelia garinii* (concise communication), 159–163
Actinobacter spp., quinolone resistance, 248–254
Acute exacerbations of chronic bronchitis (AECB), 2S42
  etiology, 2S9, 2S43
  fluoroquinolones, 2S33, 2S43–44
    grepafloxacin, S25, S29
Aeromonas sobria and *Hafnia alvei* as cause of acute cholecystitis: case from northern Europe (correspondence), 607–609
AIDS *see* Acquired immune deficiency syndrome
Alexomycin (U-82127), comparative in vitro activity tested against *Escherichia coli*, *Salmonella* spp. and enterococci (concise communication), 601–603
Amikacin
  combined with vancomycin, methicillin-resistant and methicillin-susceptible *Staphylococcus aureus* (concise communication), 657–659
  resistance, Gram-negative bacteremia, 199–203
Amoxycillin
  activities against *Streptococcus pneumoniae* strains, comparison with other antibiotics (concise communication), 170–173
  Haemophilus influenzae susceptibilities, Etest reading (correspondence), 731–733
Amoxycillin/clavulanate resistance related to β-lactamase content in *E.coli* from community-acquired urinary tract infections, 321–324
Amphotericin B lipid complex (ABLC; Abelcet), compassionate use in life-threatening fungal infections, 192–198
Amplified fragment length polymorphism typing (AFLP), *Chlamydia pneumoniae* (concise communication), 663–664
Amplified *Mycobacterium tuberculosis* direct test (AMTD), clinical utility for diagnosis of pulmonary tuberculosis, 442–446
Anaerobic bacteria: antianaerobic activity of cecropin—melittin peptide, 181–185
Animal models
  bacterial meningitis (notes and comments), 557–559
  co-infection, 559–562
  ethical consideration in use in infection (notes and comments), 613–614
  mycobacterial infection (notes and comments), 553–556
  Second International Symposium in Infection Models in Antimicrobial Chemotherapy (notes and comments), 553–562, 613–621
  therapeutic role of cytokines in sepsis (notes and comments), 615–617
  visna virus in sheep as model for chemotherapy of lentiviral central nervous system infections (notes and comments), 628–621
Antibiograms (correspondence), 232
Antibiotic resistance
  antibiotic usage and: study of bacteria from blood cultures in a Danish county, 422–430
  Helicobacter pylori, prevalence (concise communication), 726–728
  Listeria monocytogenes from humans and food in UK, 1967–96 (concise communication), 410–412
  normal fecal flora *Escherichia coli* isolates, 563–569
  notes and comments, 2–3, 177–178
  patterns among aerobic Gram-negative bacilli from patients in intensive care units, 497–507
  respiratory tract infections, S1–8
    epidemiology, 2S19–22
    mechanisms, 2S22–25
  Streptococcus pneumoniae isolated from pediatric infections in central Greece, 695–700
  SWAB initiative (news), 58
  see also under specific antibiotics and organisms
Antibiotic therapy
  of acute bronchitis in adults, 436–441
  animal models, Second International Symposium (notes and comments), 553–562, 613–621
  endocarditis
    outpatient treatment, 3S47–55
    prophylactic treatment, 3S56–61
    streptococcal and enterococcal, 3S17–26
  parenteral, outpatient and home: consensus statement by UK working party, 537–551
  peritonitis, early bacterial and inflammatory responses, 701–709
Antibiotics
  activity against respiratory pathogens, 2S10–15
  β-lactam
    activity against *Bacteroides fragilis* strains, Kuwait (concise communication), 728–730
    bactericidal activity of three β-lactams alone or in combination with β-lactamase inhibitor and two aminoglycosides against *Klebsiella pneumoniae* harboring extended-spectrum β-lactamases, 570–576

Enterobacter cloacae resistance (concise communication), 53–55
pharmacokinetics and pharmacodynamics in micropig: continuous infusion versus intermittent injection, 18–26
resistance in respiratory pathogens, 2S22–23
broad- and narrow-spectrum: a different approach (correspondence), 56–57
colon-stimulating factors and (notes and comments), 119–122
macrolide, resistance in respiratory pathogens, 2S23
susceptibility of bacteria, terminology (Eucast Definitive Document), 291–296
usage, resistance and: study of bacteria from blood cultures in a Danish county, 422–430
see also Postantibiotic effect
Aortitis, *Salmonella*, ciprofloxacin treatment (concise communication), 230–231
Arthritis, septic, *Listeria monocytogenes* and (concise communication), 165–168
Aspergillus spp. isolated from clinical specimens, significance of, 710–716
Atherosclerosis, intracellular pathogens and, 4S33–36
Chlamydia pneumoniae, 4S3–4, 4S23–32, 4S34–35
Bacteremia
catheter-related
long-term follow-up of patients treated without catheter removal (concise communication), 472–476
Tsukamurella pulmonis and (concise communication), 51–53
coagulase-negative staphylococci, slime-producing properties, 689–694
evaluation of BacT/Alert and VITAL blood culture systems, 88–93
fast diagnosis, assessment of BacT/Alert system with loading throughout 24h, 33–37
Gram-negative
molecular typing to investigate bacterial translocation from intestinal tract in malnourished children, 70–74
resistance to amikacin and gentamicin, 199–203
Kluyvera ascorbata, cirrhotic patient (concise communication), 113–115
Methylobacterium, AIDS patients (concise communication), 112–113
Mycobacterium avium complex, HIV-positive patients, 271–274
Roseomonas spp. (concise communication), 109–112
Streptococcus pyogenes T1 strain variations, 316–320
Bacteriuria, infants and young children, and its relation to bacterial species and pyuria (concise communication), 284–287
Bacteroides fragilis, activity of β-lactam antimicrobial agents against clinical isolates, Kuwait (concise communication), 728–730
Beta-lactamases
Escherichia coli strains, amoxycillin/clavulanate resistance and, 321–324
extended-spectrum, *Klebsiella pneumoniae*, bactericidal activity of three β-lactams alone or in combination, 570–576
prevalence of stably depressed class 1 β-lactamase in multiresistant isolates of *E.cloacae* (concise communication), 53–55
in vitro concentrations of cefepime and ceftazidime for AmpC β-lactamase hyperproducer *Enterobacter cloacae* variants, 585–588
Beta-lactams *see* Antibiotics, β-lactam
Bile acids, 7α-dehydroxylation, effect of clindamycin given alone or with *Lactobacillus delbrueckii* and *Streptococcus thermophilus*, 594–598
Blood culture systems
assessment of BacT/Alert: rapid bacteremia diagnosis with loading throughout 24h, 33–37
Bactec detection of mycobacteria, 401–404
blood volumes in BACTECPLUS/F culture bottles sampled using direct draw technique (concise communication), 471–472
evaluation of BacT/Alert and VITAL systems for bacteremia diagnosis, 88–93
Borrelia infections
interpretation of immunoblots for Lyme borreliosis using semiquantitative approach, 205–212
serological confirmation by immunoblot of *Borrelia afzelii*/*Borrelia garinii*, acrodermatitis chronica atrophicans, (concise communication), 159–163
Bronchitis
acute, 2S44
antimicrobial chemotherapy in adults: double-blind placebo-controlled trial, 436–441
chronic, acute exacerbations *see* Acute exacerbations of chronic bronchitis
Burkholderia cepacia, survival and multiplication within respiratory epithelial cells, 450–459
Campylobacter fetus subsp. *fetus*, infection of abdominal aortic aneurysm (concise communication), 527–529
Campylobacter jejuni, water-borne infection
epidemiological investigation of outbreak, 648–656
lessons learned from epidemiologic and microbiological study, 670–671
Candida spp., typing, pulsed-field gel electrophoresis and PCR fingerprinting, 82–87
Cardiovascular disease, intracellular pathogens and, 4S33–36
Chlamydia pneumoniae, 4S3–4, 4S34–5
preclinical models, 4S23–32
Catheter-related bacteremia
long-term follow-up of patients treated without catheter removal (concise communication), 472–476
Tsukamurella pulmonis and (concise communication), 51–53
Catheters, central venous, safety and complications in AIDS patients, 508–513
Cecropin—melittin peptide, antianaerobic activity, 181–185
Cefepime, in vitro selective concentrations for AmpC β-lactamase hyperproducer *Enterobacter cloacae* variants, 585–588
Cefpirome
combined with vancomycin, methicillin-resistant *Staphylococcus aureus* (correspondence), 733–734
pharmacokinetics and pharmacodynamics in micropig: continuous infusion versus intermittent injection, 18–26
Cephalosporins, *Enterobacter cloacae* resistance (concise communication), 53–55
Cephamycinase (CMY-2), production by *Escherichia coli* from patient from Libyan-Tunisian border (concise communication), 168–170
Chemotherapy, targeted, bacterial and plant protein toxins (notes and comments), 357–358
Children
Norwalk-like virus as cause of nosocomial diarrhea, 417–421

serotyping and antibiotic resistance of *Streptococcus pneumoniae*, 695–700
see also Infants
Chlamydia pneumoniae
antibiotic activity against, 2S13, 2S14
cardiovascular disease, 4S3–4, 4S34–35
preclinical models, 4S23–32
diagnosis, 4S7–13
epidemiology, 4S1–6
typing by amplified fragment length polymorphism (concise communication), 663–664
Chlamydia trachomatis
plasmid DNA, inhibition of amplification by ligase chain reaction associated with female urines, 397–400
unclassified serovars isolated from Japanese infants, 519–523
Cholecystitis, *Kluyvera ascorbata*, cirrhotic patient (concise communication), 113–115
Cholecystitis due to *Aeromonas sobria* and *Hafnia alvei*, case from northern Europe (correspondence), 607–609
Ciprofloxacin
bactericidal effects compared with levofloxacin and sparfloxacin, 264–270
combined with vancomycin, methicillin-resistant and methicillin-susceptible *Staphylococcus aureus* (concise communication), 657–659
Neisseria gonorrhoeae susceptibility to, 627–633
Salmonella aortitis (concise communication), 230–231
Clindamycin, effect given alone or with *Lactobacillus delbrueckii* and *Streptococcus thermophilus* on 7α-dehydroxylation of bile acids, 594–598
Clostridium septicum endocarditis and myocarditis, after reconstruction of congenital heart disease (concise communication), 533–535
Clozapine, sepsis and neutropenia induction (concise communication), 604–605
Co-infection, animal models (notes and comments), 559–562
Colony-stimulating factors and antibiotics (notes and comments), 119–122
Compliance, infectious disease management and (continuing education), 275–279
Continuing medical education
critical relationship between compliance and management of infectious diseases, 275–279
cutaneous manifestations of bacterial diseases, 460–463
enteric infections due to *Escherichia coli*, 38–43
hydatid disease, 405–409
illustrated, 155–156, 220–221
management of primary HIV infection, 103–107
onchocerciasis, 524–526
Coronary heart disease, intracellular pathogens/*Chlamydia pneumoniae* and, 4S3–4, 4S33–36
Coryneform bacteria, identification using second-line biochemical and susceptibility tests, 332–338
Cytokines
neopterin and, in febrile neutropenia, 491–496
therapeutic role in sepsis, animal models (notes and comments), 615–617
DF-3 microorganism, clinical isolation and review of literature (concise communication), 344–346
Diarrhea
Escherichia coli and *see under Escherichia coli*
nosocomial, Norwalk-like virus as cause in pediatric hospital, 417–421
travelers, prevalence of diarrheagenic strains detected by PCR, 682–688
Dot-blot test, diagnosis of enteric fever caused by *Salmonella typhi*, 64–69
Drug abuse, intravenous, serum levels of β_2-microglobulin, neopterin, TNF-α and soluble receptors of TNF-α and IL-2 in abusers according to HIV-1 status and stage of infection, 4–10
Electrophoresis, pulsed-field gel *see* Pulsed-field gel electrophoresis
Encephalitis, herpes simplex, European guidelines for diagnosis and management of suspected disease, 178–180 (notes and comments), 606–607 (correspondence)
Endocarditis
antibiotic prophylaxis, 3S56–61
antibiotic treatment
outpatient, 3S47–55
streptococcal and enterococcal infections, 3S17–26
Clostridium septicum, after reconstruction of congenital heart disease (concise communication), 533–535
diagnosis
approach to, 3S3–9
microbiological recommendations, 3S10–16
enterococcal, antibiotic treatment, 3S21–24
Haemophilus influenzae type b, patient with mitral valve prolapse (concise communication), 115–116
microbiological recommendations for diagnosis and follow-up, 3S10–16
Neisseria elongata subspecies *nitroreducens*, description and differentiation from *Kingella denitrificans*, 514–518
outpatient treatment, 3S47–55
pulmonary valve, caused by *Streptococcus bovis* (concise communication), 599–600
staphylococcal, recommendations for therapy, 3S27–33
Staphylococcus haemolyticus, diagnosis and treatment in hemodialysis patient (concise communication), 44–48
streptococcal, antibiotic treatment, 3S17–21, 3S24–25, 3S50–53
surgical treatment, recommendations, 3S34–46
Enteric fever, *Salmonella typhi*, immunoenzymatic dot-blot test, 64–69
Enteric infections, *Escherichia coli* and (continuing education), 38–43
correspondence on, 414–416
Enterobacter cloacae
AmpC β-lactamase hyperproducer variants, in vitro concentrations of cefepime and ceftazidime for, 585–588
prevalence of stably depressed class 1 β-lactamase in multiresistant isolates (concise communication), 53–55
quinolone resistance, 75–81
Enterococcal endocarditis, antibiotic treatment, 3S17–26
Enterococcus avium osteomyleitis (concise communication), 290
Epidemiology
characterization of clinical isolates of *Pseudomonas aeruginosa* (concise communication), 466–468
Chlamydia pneumoniae, 4S1–6
investigation of *Campylobacter jejuni* water-borne infection, 648–656
molecular
Pseudomonas aeruginosa in hospitalized patients, 242–247
quinolone resistance in *Actinobacter* spp., 248–254

penicillin resistance in *Streptococcus pneumoniae* isolates, 11–17
reduced susceptibility to *Neisseria gonorrhoeae*, 627–633
Epstein—Barr virus, detection by PCR in cerebrospinal fluid of HIV-infected patients, 577–584
Escherichia coli
0157 infection masquerading as 'rectal bleeding' (correspondence), 667
amoxycillin/clavulanate resistance related to β-lactamase content from community-acquired urinary tract infections, 321–324
antibiotic-resistant, in normal fecal flora, 563–569
cephamycinase (CMY-2) production by strain from Libyan-Tunisian border (concise communication), 168–170
community-acquired pneumonia, 717–725
enteric infections (continuing education), 38–43
correspondence on, 414–416
enteroaggregative (EAggEC), childhood diarrhea in Congo, genotypic and phenotypic markers, 213–219
prevalence of diarrheagenic strains detected by PCR in patients with travelers diarrhea, 682–688
Etest reading, *Haemophilus influenzae* susceptibilities to amoxycillin (correspondence), 731–733
Extracorporeal shock-wave lithotripsy, severe sepsis due to *Mycobacterium tuberculosis* (concise communication), 108–109
Fever of unknown origin: neuropenia, neopterin and cytokines, 491–496
Fluoronaphthyridones: international multicenter investigation of LB20304 (concise communication), 280–284
Fluoroquinolones
pharmacokinetics and pharmacodynamics, 2S27–41
resistance to, S9–10, S17–18
Actinobacter spp., 248–254
Enterobacter cloacae, 75–81
in respiratory pathogens, 2S23–24
respiratory tract infections
Haemophilus influenzae, 2S13, 2S15
lower, S25–31, S32–33, 2S42–50
Moraxella catarrhalis, 2S13, 2S15
Streptococcus pneumoniae, 2S10–12, 2S14–15
upper, 2S51–58
see also Grepafloxacin
Gatifloxacin, bactericidal activity in plasma and urine, 302–396
GB virus C *see* Hepatitis G virus
Gentamicin
aerobic, antimicrobial resistance patterns in intensive care units, 497–507
in combination with meropenem, postantibiotic effect, 431–435
resistance, Gram-negative bacteremia, 199–203
Gram-negative bacteria
bacteremia
bacterial translocation from intestinal tract in malnourished children, 70–74
resistance to amikacin and gentamicin, 199–203
DF-3, isolation and review of literature (concise communication), 344–346
translocation from intestinal tract in malnourished children with bacteremia, 70–74
Gratifloxacin, bactericidal activity in plasma and urine (correspondence), 731
Grepafloxacin
clinical efficacy and tolerability, lower respiratory tract infection, S25–31
microbiological properties, S9–14
pharmacokinetics, S21–23
safety profile, S18–19, S30
structure relative to activity, S15–18
tissue penetration, S23–24
Guanosine monophosphate, cyclic (cGMP), high intraplatelet levels in sepsis (concise communication), 163–165
Gut microflora management
effect of clindamycin given alone or with *Lactobacillus delbrueckii* and *Streptococcus thermophilus* on 7α-dehydroxylation of bile acids, 594–598
probiotics and prebiotics in (notes and comments), 477–480
gyrA gene, changes in relation to quinolone resistance in *Enterobacter cloacae*, 75–81
Haemophilus influenzae
amoxycillin susceptibilities, Etest reading (correspondence), 731–733
antibiotic activity against, 2S12
fluoroquinolones, 2S13, 2S15
drug resistance, 2S21
β-lactams, 2S23
fluoroquinolones, 2S23–24
type b, endocarditis in patient with mitral valve prolapse (concise communication), 115–116
Hafnia alvei and *Aeromonas sobria* as cause of acute cholecystitis: case from northern Europe (correspondence), 607–609
Helicobacter pylori
antibodies against in feces and saliva, before and after eradication therapy, 634–643
normal gastric microflora and, effect of omeprazole and amoxycillin, 308–315
prevalence of antibiotic resistance (concise communication), 726–728
vaginal secretions, failure to detect (concise communication), 412–413
Hemodialysis, diagnosis and treatment of *Staphylococcus haemolyticus* endocarditis (concise communication), 44–48
Hemophilia, efficacy of subunit trivalent influenza vaccine, 589–593
Hepatitis C virus, symptomatic occupational transmission (concise communication), 354
Hepatitis G virus
lack of association with chronic hepatitis, Senegal (concise communication), 222–223
prevalence in different risk groups of HIV-infected patients, 644–647
review, 677–681
Herpes simplex encephalitis, European guidelines for diagnosis and management of suspected disease, 178–180 (notes and comments), 606–607 (correspondence)
Hip, prosthetic, *Salmonella hirschfeldii* infection (concise communication), 228–230
HIV infection
CD95 and CD96 expression on T-cells as possible marker for non-/slow-progressors (concise communication), 464–465
MAC bacteremia in HIV-positive patients, 271–274
management of primary infection (continuing education), 103–107

ozone therapy, lack of efficacy (correspondence), 667–669
persistent positive sputum culture of *Legionella* pneumophila[u] (concise communication), 665–667
prevalence of GB virus/hepatitis G virus in HIV-infected patients, 644–647
Rhodococcus equi systemic infection in HIV-infected child (concise communication), 353–354
serum levels of β_2-microglobulin, neopterin, TNF-α and soluble receptors of TNF-α and IL-2 in intravenous drug abusers according to HIV-1 status and stage of infection, 4–10
see also Acquired immune deficiency syndrome
HIV-1
focal neurologic signs in infected patients, diagnostic role of PCR, 577–584
heterozygosity for CCR-5 ..32 deletion in transmission and disease progression (concise communication), 351–353
Kawasaki disease and parvovirus B19 infection in adult HIV-1–infected patient (correspondence), 609–610
HMR 3004
activity against *Mycobacterium avium* complex in vitro, 325–331
pharmacodynamic properties demonstrated by studies of time kill kinetics and postantibiotic effect, 186–191
Hospitals
Acinetobacter baumanii outbreak in orthopedic ward (concise communication), 468–471
antimicrobial resistance patterns among Gram-negative bacilli from patients in intensive care units, 497–507
legionella outbreak, investigation and control, 385–391
nosocomial pneumonia, 2S44–45
pediatric, Norwalk-like virus as cause of diarrhea, 417–421
Pseudomonas aeruginosa infection risk factors, 242–247
reinfection with *Mycobacterium tuberculosis* (concise communication), 49–51
Hydatid disease (continuing education), 405–409
Imipenem combined with vancomycin, methicillin-resistant and methicillin-susceptible *Staphylococcus aureus* (concise communication), 657–659
Immunoblots, borrelia infection
confirmation of *Borrelia afzelii/Borrelia garinii*, acrodermatitis chronica atrophicans (concise communication), 159–163
interpretation for Lyme borreliosis using semiquantitative approach, 205–212
Infants, unclassified serovars of *Chlamydia trachomatis*, 519–523
Influenza vaccine, subunit trivalent, efficacy in previously vaccinated children suffering from hemophilia, 589–593
Intensive care, infections in patients requiring ventilation: new classification, 94–102
Intensive care units, antimicrobial resistance patterns among Gram-negative bacilli, 497–507
Interleukin-2 (IL-2), soluble receptors (sIL-2R), serum levels in intravenous drug abusers according to HIV-1 status and stage of infection, 4–10
Interleukin-6 (IL-6), production in whole blood stimulated by live Gram-negative and Gram-positive bacteria, 129–134
Intracellular pathogens
cardiovascular diseases and, 4S33–36
respiratory tract infections, 4S14–22
see also Clamydiae pneumoniae
JC virus, detection by PCR in cerebrospinal fluid of HIV-infected patients, 577–584
Kawasaki disease and parvovirus B19 infection in adult HIV-1–infected patient (correspondence), 609–610
Kelotides
activity of HMR3004 agains *Mycobacterium avium* complex in vitro, 325–331
pharmacodynamic properties of HMR 3004 demonstrated by studies of time kill kinetics and postantibiotic effect, 186–191
Kingella denitrificans endocarditis, differentiation from *Neisseria elongata* subspecies *nitroreducens*, 514–518
Klebsiella pneumoniae producing extended-spectrum β-lactamases, bactericidal activity of three β-lactams alone or in combination, 570–576
Kluyvera ascorbata, cholecystitis and bacteremia in cirrhotic patient (concise communication), 113–115
LB20304, international multicenter investigation (concise communication), 280–284
Legionella, urinary antigen enzyme immunoassay, multicenter evaluation, 359–365
Legionella pneumophila
antibiotic activity against, 2S14
nosocomial outbreak, investigation and control, 385–391
persistent positive sputum culture in HIV-infected patient (correspondence), 665–667
polymerase chain reaction
detection in serum samples, 144–148
typing by arbitrarily primed PCR, 149–154
Lentivirus central nervous system infections, visna in sheep as model for chemotherapy (notes and comments), 628–621
Levofloxacin, bactericidal effects compared with ciprofloxacin and sparfloxacin, 264–270
Listeria monocytogenes
from humans and food in UK, antimicrobial resistance in (concise communication), 410–412
septic arthritis (concise communication), 165–168
Lyme borreliosis, interpretation of immunoblots using semiquantitative approach, 205–212
Macrolides, resistance in respiratory pathogens, 2S23
Malnutrition
Gram-negative bacteremia and, molecular typing to investigate bacterial translocation from intestinal tract, 70–74
infection and (correspondence), 176
Menigococcal infections
invasive disease probably associated with swimming pool (concise communication), 349–350
surveillance, Belgium (concise communication), 224–118
Meningitis, bacterial, rabbit model (notes and comments), 557–559
Meningococcus *see Neisseria meningitidis*
Meropenem
in combination with gentamicin or sparfloxacin, postantibiotic effect, 431–435
pharmacokinetics and pharmacodynamics in micropig: continuous infusion versus intermittent injection, 18–26
Methicillin-resistant *Staphylococcus aureus*
cefpirome—vancomycin combination (correspondence), 733–734
clonal types survey, Portuguese teaching hospital, 373–384
spread of epidemic clones in Poland, 481–490
in vitro activity of vancomycin combined with rifampin,

amikacin, ciprofloxacin or imipenem (concise communication), 657–659
β_2-Microglobulin, serum levels in intravenous drug abusers according to HIV-1 status and stage of infection, 4–10
Molecular epidemiology
Pseudomonas aeruginosa in hospitalized patients, 242–247
quinolone resistance in *Actinobacter* spp., 248–254
Molecular typing
bacterial translocation from intestinal tract in malnourished children with Gram-negative bacteremia, 70–74
methicillin-resistant *Staphylococcus aureus* infections, 373–384
methods of, and their discriminatory power (notes and comments), 61–63
see also under individual typing methods
Moraxella catarrhalis
antibiotic activity against, 2S12–13, 2S15
drug resistance, 2S21–22
Mycobacteria
Bactec detection in blood cultures, 401–404
evaluation of MB/BACT culture system versus culture on Lowenstein medium, 339–343
Mycobacterial diseases
antimicrobial chemotherapy, animal models (notes and comments), 553–556
cutaneous manifestations (continuing education), 460–463
Mycobacterium avium complex (MAC)
activitvity of HMR3004, 325–331
bacteremia, HIV-positive patients, 271–274
Mycobacterium tuberculosis
detection in respiratory specimens by target-amplified test, effect of two decontamination procedures (concise communication), 116–118
reinfection in urban tuberculosis hospital (concise communication), 49–51
severe sepsis following extracorporeal shock-wave lithotripsy (concise communications), 108–109
Mycoplasma pneumoniae, antibiotic activity against, 2S13–14
Myelitis, *Schistosoma mansoni* (concise communication), 157–159
Myocarditis, *Clostridium septicum*, after reconstruction of congenital heart disease (concise communication), 533–535
Neisseria elongata subspecies *nitroreducens* endocarditis, description and differentiation from *Kingella denitrificans*, 514–518
Neisseria gonorrhoeae: incidence, epidemiology and evolution of reduced susceptibility to ciprofloxacin, 627–633
Neisseria meningitidis
characteristics of pathogenic strains in Moscow, 123–128
reduced susceptibility to penicillin, France (concise communication), 661–662
Neopterin, serum levels in intravenous drug abusers according to HIV-1 status and stage of infection, 4–10
Neopterin and cytokines in febrile neutropenia, 491–496
Neutropenia
clozapine-induced (concise communication), 604–605
febrile, neopterin and cytokines in, 491–496
Norwalk-like virus as cause of diarrhea in pediatric hospital, 417–421
Nosocomial infections *see under* Hospitals
Onchocerciasis (continuing education), 524–526
Osteomyelitis, *Enterococcus avium* (concise communication), 290
Otitis media, 2S54
acute, 2S10, 2S54–55
chronic suppurative, 2S55–56
immunocompromised host, 2S56
Outpatient and home parenteral antibiotic therapy (OHPAT) in UK: consensus statement by UK working party, 537–551
Ozone therapy, lack of efficacy in HIV infection (correspondence), 667–669
Paratyphi C infection, prosthetic hip (concise communication), 228–230
Parvovirus B19 infection and Kawasaki disease in adult HIV-1–infected patient (correspondence), 609–610
Penicillin
reduced susceptibility of meningococci, France (concise communication), 661–662
resistance, epidemiology in *Streptococcus pneumoniae* isolates in eastern France, 11–17
Peptides, antimicrobial: antianaerobic activity of cecropin—melittin hybrid, 181–185
Peritonitis, polymicrobial, early bacterial and inflammatory responses to antibiotic therapy, 701–709
Pharyngitis, 2S56
Pneumonia
community-acquired, 2S45
bacteremic pneumonococcal, sparfloxacin treatment 135–143#
etiology, 2S9, 2S45
fluoroquinolones/grepafloxacin, S25–28, S33, 2S45–48
intracellular pathogens, 4S14–16
Escherichia coli, community-acquired, 717–723
nosocomial, 2S44–45
fluoroquinolones, 2S45
Polymerase chain reaction (PCR)
analysis of ascitic fluid for diagnosis of disseminated toxoplasmosis in patient with hematological malignancy (concise communication), 223–224
analysis of unclassified serovars of *Chlamydia trachomatis*, 519–523
detection of *Escherichia coli* strains in patients with travelers diarrhea, 682–688
detection of *Toxoplasma gondii*, Epstein-Barr virus and JC virus in HIV-1 patients with focal neurologic signs, 577–584
epidemiological typing of *Candida* spp., 82–87
Legionella pneumophila
detection in serum samples, 144–148
typing by arbitrarily primed PCR, 149–154
primer-specific, characterization of coagulase-negative streptococci, 27–32
Postantibiotic effect (PAE)
agents used against respiratory tract infections, 2S15
meropenem in combination with gentamicin or sparfloxacin, 431–435
Probiotics and prebiotics, management of gut microflora (notes and comments), 477–480
Procalcitonin, diagnostic and prognostic marker for severe infections (review), 237–241
Propionibacterium acnes infections, clinical spectrum (concise communication), 48–49
Protein toxins, bacterial and plant, use for targeted chemotherapy (notes and comments), 357–358
Proteus spp., swarming inhibition by psychotropic drugs, 447–449

Pseudomonas aeruginosa
epidemiological characterization of clinical isolates in southwestern Greece (concise communication), 466–468
frequency and molecular diversity on admission and during hospitalization, 242–247
Psychotropic drugs, inhibition of swarming in *Proteus* spp. and related genera, 447–449
Pulmonary valve endocarditis, caused by *Streptococcus bovis* (concise communication), 599–600
Pulsed-field gel electrophoresis
assessment of penicillin resistance in *Streptococcus pneumoniae* isolates, 11–17
epidemiological typing of *Candida* spp., 82–87
Quinolones *see* Fluoroquinolones
Recalcitrant erythematous desquamating (RED) disorder in child, relapse involving same *Staphylococcus aureus* strain (concise communication), 287–290
Respiratory epithelial cells, survival and multiplication of *Burkholderia cepacia*, 450–459
Respiratory tract infections
antibiotic resistance, S1–8
epidemiology, 2S19–22
mechanisms, 2S22–25
atypical pathogens, S5–6, 2S8–9
Chlamydia pneumoniae, 4S2–3
etiology, 2S8–10
fluoroquinolones *see* Fluoroquinolones, respiratory tract infection; Grepafloxacin
immunopathology, 2S1–7
intracellular pathogens, 4S14–22
lower, 2S9, 2S42–50
fluoroquinolone treatment, S25–31, S32–33, 2S43–44, 2S45–48
upper, 2S9–10, 2S51–58
carrier states, 2S56
Restriction fragment length polymorphism (RFLP), identification of unclassified serovars of *Chlamydia trachomatis*, 519–523
Rhodococcus equi systemic infection in HIV-infected child (concise communication), 353–354
Ribotyping, characterization of coagulase-negative streptococci, 27–32
Rifampin combined with vancomycin, methicillin-resistant and methicillin-susceptible *Staphylococcus aureus* (concise communication), 657–659
Roscomonas spp., bacteremia (concise communication), 109–112
Rothia dentocariosa, species identification using whole cell protein and 16S rRNA gene sequence analysis, 255–263
Roxithromycin, *Chlamydia pneumoniae* infection, 4S26, 4S29, 4S34–35
Salmonella hirschfeldii infection, prosthetic hip (concise communication), 228–230
Salmonella typhi, enteric fever, immunoenzymatic dot-blot test, 64–69
Salmonella/*Salmonella* infection
aortitis, ciprofloxacin treatment (concise communication), 230–231
International Symposium on *Salmonella* and Salmonellosis, May 1997 (news), 233–23234
Schistosoma mansoni myelitis (concise communication), 157–159
Sepsis
clozapine-induced (concise communication), 604–605
high intraplatelet cGMP levels (concise communication), 163–165
Mycobacterium tuberculosis, extracorporeal shock-wave lithotripsy (concise communication), 108–109
therapeutic role of cytokines, animal models (notes and comments), 615–617
Septicemia, *Staphylococcus aureus*, cytokine response to exotoxins, 366–372
Sinusitis
acute maxillary, 2S9–10, 2S51–53
chronic, 2S53–54
immunocompromised host, 2S54
Society for Health Care Epidemiology of America (news), 58–59
Sparfloxacin
bactericidal effects compared with levofloxacin and ciprofloxacin, 264–270
in combination with meropenem, postantibiotic effect, 431–435
pneumococcal bacteremic community-acquired pneumonia, 135–143
Staphylococcal endocarditis, recommendations for treatment, 3S27–33
Staphylococci, coagulase-negative
characterization by primer-specific polymerase chain reaction and ribotyping, 27–32
slime-producing properties, 689–694
Staphylococcus aureus
endocarditis, 3S27–28, 3S31, 3S53–54
methicillin-resistant
cefpirome—vancomycin combination (correspondence), 733–734
clonal types survey in Portuguese teaching hospital, 373–384
spread of epidemic clones in Poland, 481–490
methicillin-resistant and methicillin-susceptible, in vitro activity of vancomycin combined with rifampin, amikacin, ciprofloxacin or imipenem (concise communication), 657–659
recalcitrant erythematous desquamating disorder relapse in child (concise communication), 287–290
septicemia, cytokine response to exotoxins, 366–372
Staphylococcus epidermis
characterization by primer-specific polymerase chain reaction and ribotyping, 27–32
notes and comments on, 297–300
Staphylococcus haemolyticus endocarditis, diagnosis and treatment in hemodialysis patient (concise communication), 44–48
Streptococcal endocarditis, antibiotic treatment, 3S17–26, 3S50–53
Streptococcal toxic shock syndrome (concise communication), 350–351
Streptococci, group A, findings within schools over a 1–year period (concise communication), 659–661
Streptococcus bovis as cause of isolated pulmonary valve endocarditis (concise communication), 599–600
Streptococcus pneumoniae
antibiotic activity against, 2S10, 2S11
fluoroquinolones, 2S10–12, 2S14–15
antimicrobial susceptibility, children from day-care centers in central Italy, 622–626
community-acquired pneumonia, sparfloxacin treatment, 135–143
drug resistance, 2S10, 2S19–21

β-lactams, 2S22
fluoroquinolones, 2S23
macrolides, 2S23
drug-resistant, nasopharyngeal carriage (concise communication), 346–349
effectiveness of amoxycillin against penicillin-susceptible and penicillin-resistant strains (concise communication), 170–173
penicillin resistance, epidemiology in eastern France, 11–17
serotyping and antibiotic resistance, strains isolated from pediatric infections in central Greece, 695–700
Streptococcus pyogenes, T1 strain variations, bacteremia epidemics and, 316–320
Swimming pool, probable association with outbreak of invasive meningococcal disease (concise communication), 349–350
T cells, CD95 and CD96 expression as possible marker for HIV non-/slow-progressors (concise communication), 464–465
Toxic shock syndrome, streptococcal (concise communication), 350–351
Toxins, protein *see* Protein toxins
Toxoplasma gondii, detection by PCR in cerebrospinal fluid of HIV-infected patients, 577–584
Toxoplasmosis, disseminated, diagnosis by PCR analysis of ascitic fluid in patient with hematological malignancy (concise communication), 223–224
Travelers diarrhea, prevalence of *Escherichia coli* strains detected by PCR, 682–688
Trovafloxacin, in vitro activity against Gram-negative and Gram-positive pathogens, 530–532
Tsukamurella pulmonis, catheter-related bacteremia (concise communication), 51–53
Tuberculosis
prevention: BCG versus INH (review), 301–307
pulmonary, clinical utility of Gen-Probe amplified *Mycobacterium tuberculosis* direct test, 442–446
reinfection in urban hospital (concise communication), 49–51
Tumor necrosis factor-α (TNF-α)
production in whole blood stimulated by live Gram-negative and Gram-positive bacteria, 129–134
serum levels in intravenous drug abusers according to HIV-1 status and stage of infection, 4–10
soluble receptors (sTNF-55R and sTNF-75R), serum levels in intravenous drug abusers according to HIV-1 status and stage of infection, 4–10
Typhoid fever, immunoenzymatic dot-blot test, 64–69
U-82127 *see* Alexomycin
Urinary antigen enzyme immunoassay, legionella, 359–365
Vagina
flora, interpretation of Gram-stained vaginal smears (concise communication), 173–175
secretions, failure to detect *Helicobacter pylori* (concise communication), 412–413
Vancomycin
combined with cefpirome, methicillin-resistant *Staphylococcus aureus* (correspondence), 733–734
combined with rifampin, amikacin, ciprofloxacin or imipenem, methicillin-resistant/susceptible *Staphylococcus aureus* (concise communication), 657–659
Ventilation, new classification of infections, 94–102
Viruses, small round structured, as cause of diarrhea in pediatric hospital, 417–421
Visna virus in sheep as model for chemotherapy of lentiviral central nervous system infections (notes and comments), 628–621
Yersinia, Yop virulon: bacterial weapon to kill host cells (Notes and comments, 673–676
